

CLAIMS:

1. A clock comprising a support, a hand-moving mechanism attached to the support, a plurality of time indicators
5 attached to the support independently of the hand-moving mechanism, and a hand attached to the hand-moving mechanism and adapted to point to the time indicators by action of the hand-moving mechanism.
- 10 2. The clock of Claim 1 wherein the support is a hanger from which the hand-moving mechanism and time indicators are suspended.
3. The clock of Claim 2 wherein the hand-moving
15 mechanism and time indicators are suspended from the hanger by cords.
4. The clock of Claim 4 wherein the cords are torsionally resilient to prevent permanent twisting
20 of the time indicators.
5. The clock of Claim 3 wherein the hand-moving mechanism is suspended by two said cords.
- 25 6. The clock of Claim 2 wherein one of the time indicators is suspended from the hand-moving mechanism.
7. The clock of Claim 1 wherein the time indicators are

20220525001

Arabic numbers.

8. The clock of Claim 3 wherein each time indicator has a cord connector by which it is attached to one of said
5 cords.

9. The clock of Claim 8 wherein some of the time indicators include two cord connectors, one positioned above the other in use, the lower one of which suspends another said time indicator with another cord.
